AI SALES AGENT

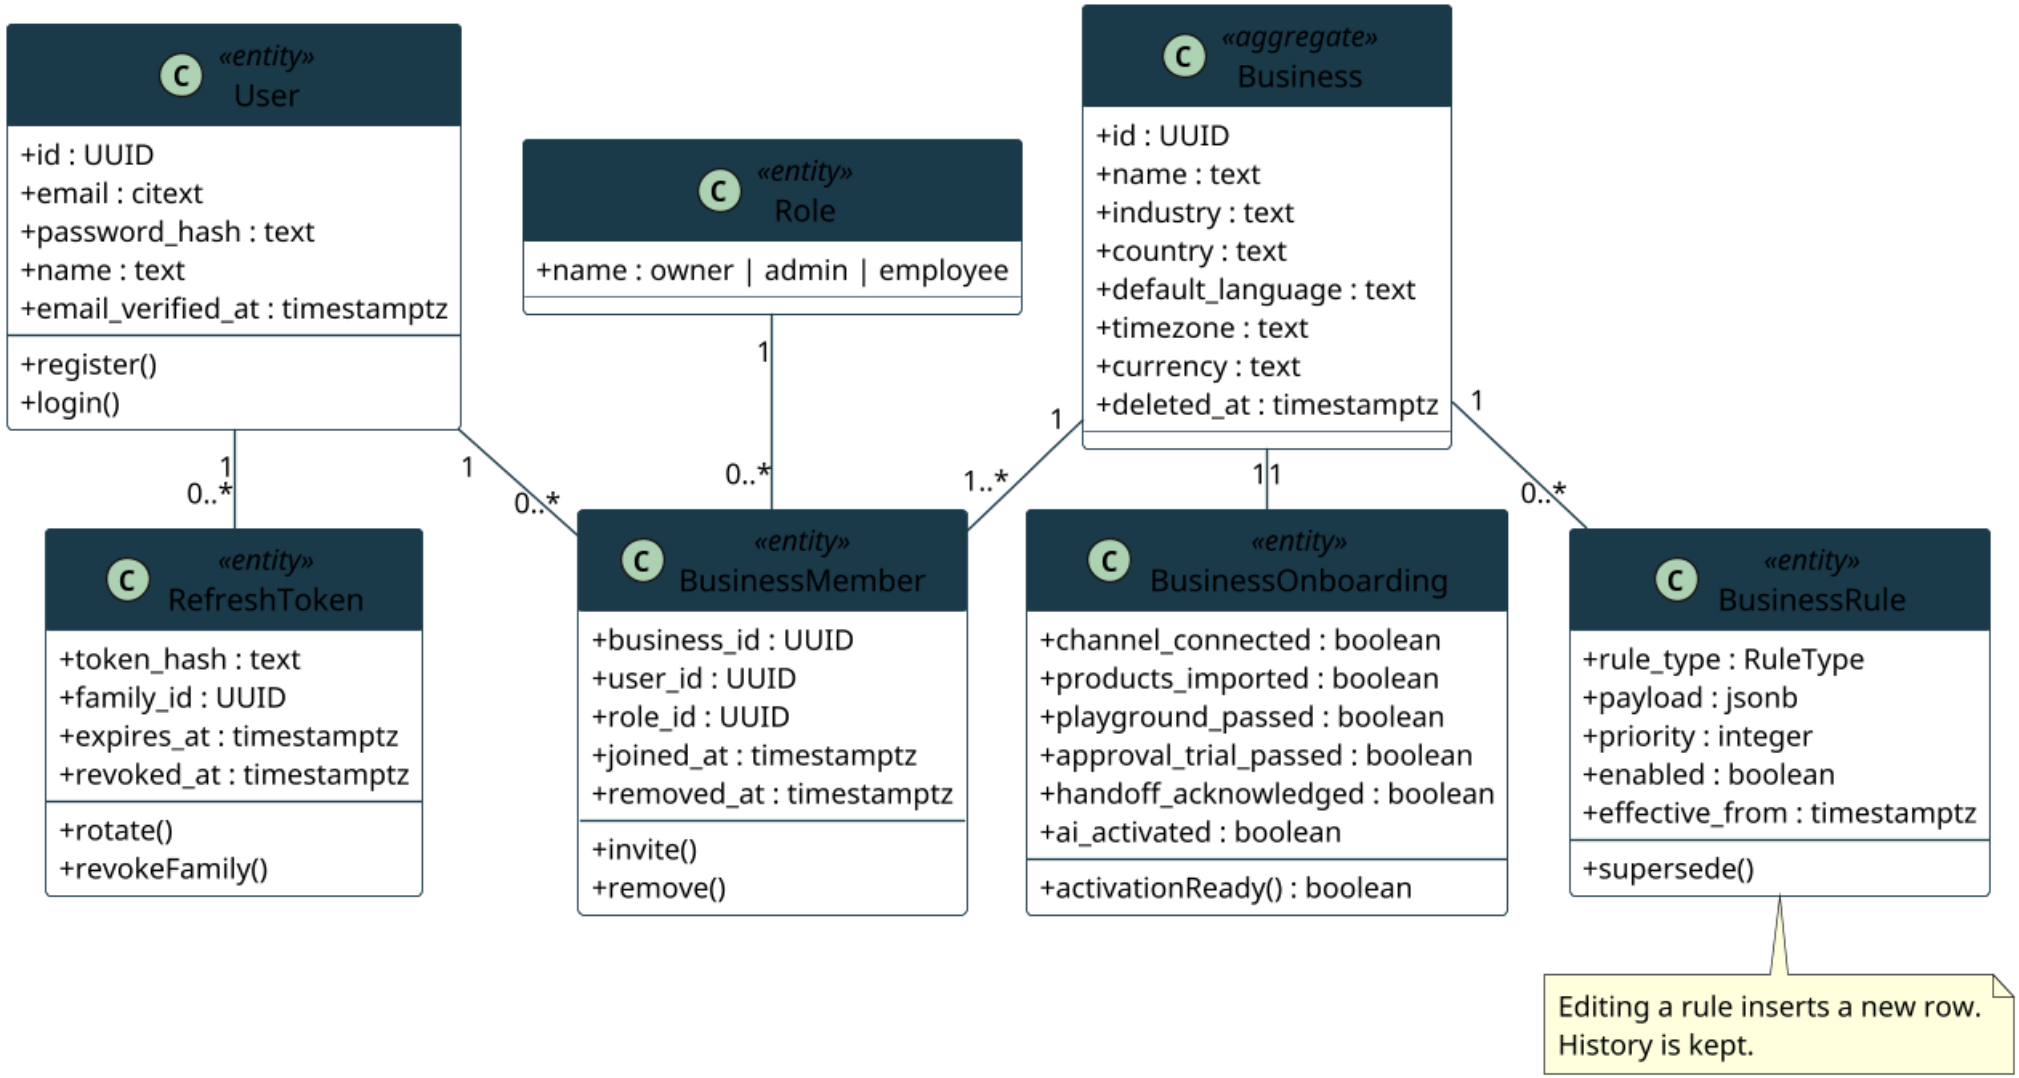

Class diagram

Domain classes for the Phase 1 model. Attributes follow the database design. Not every column is drawn.

Phase 1 MVP · 21 October 2026 · Prepared from the canonical documents in docs/

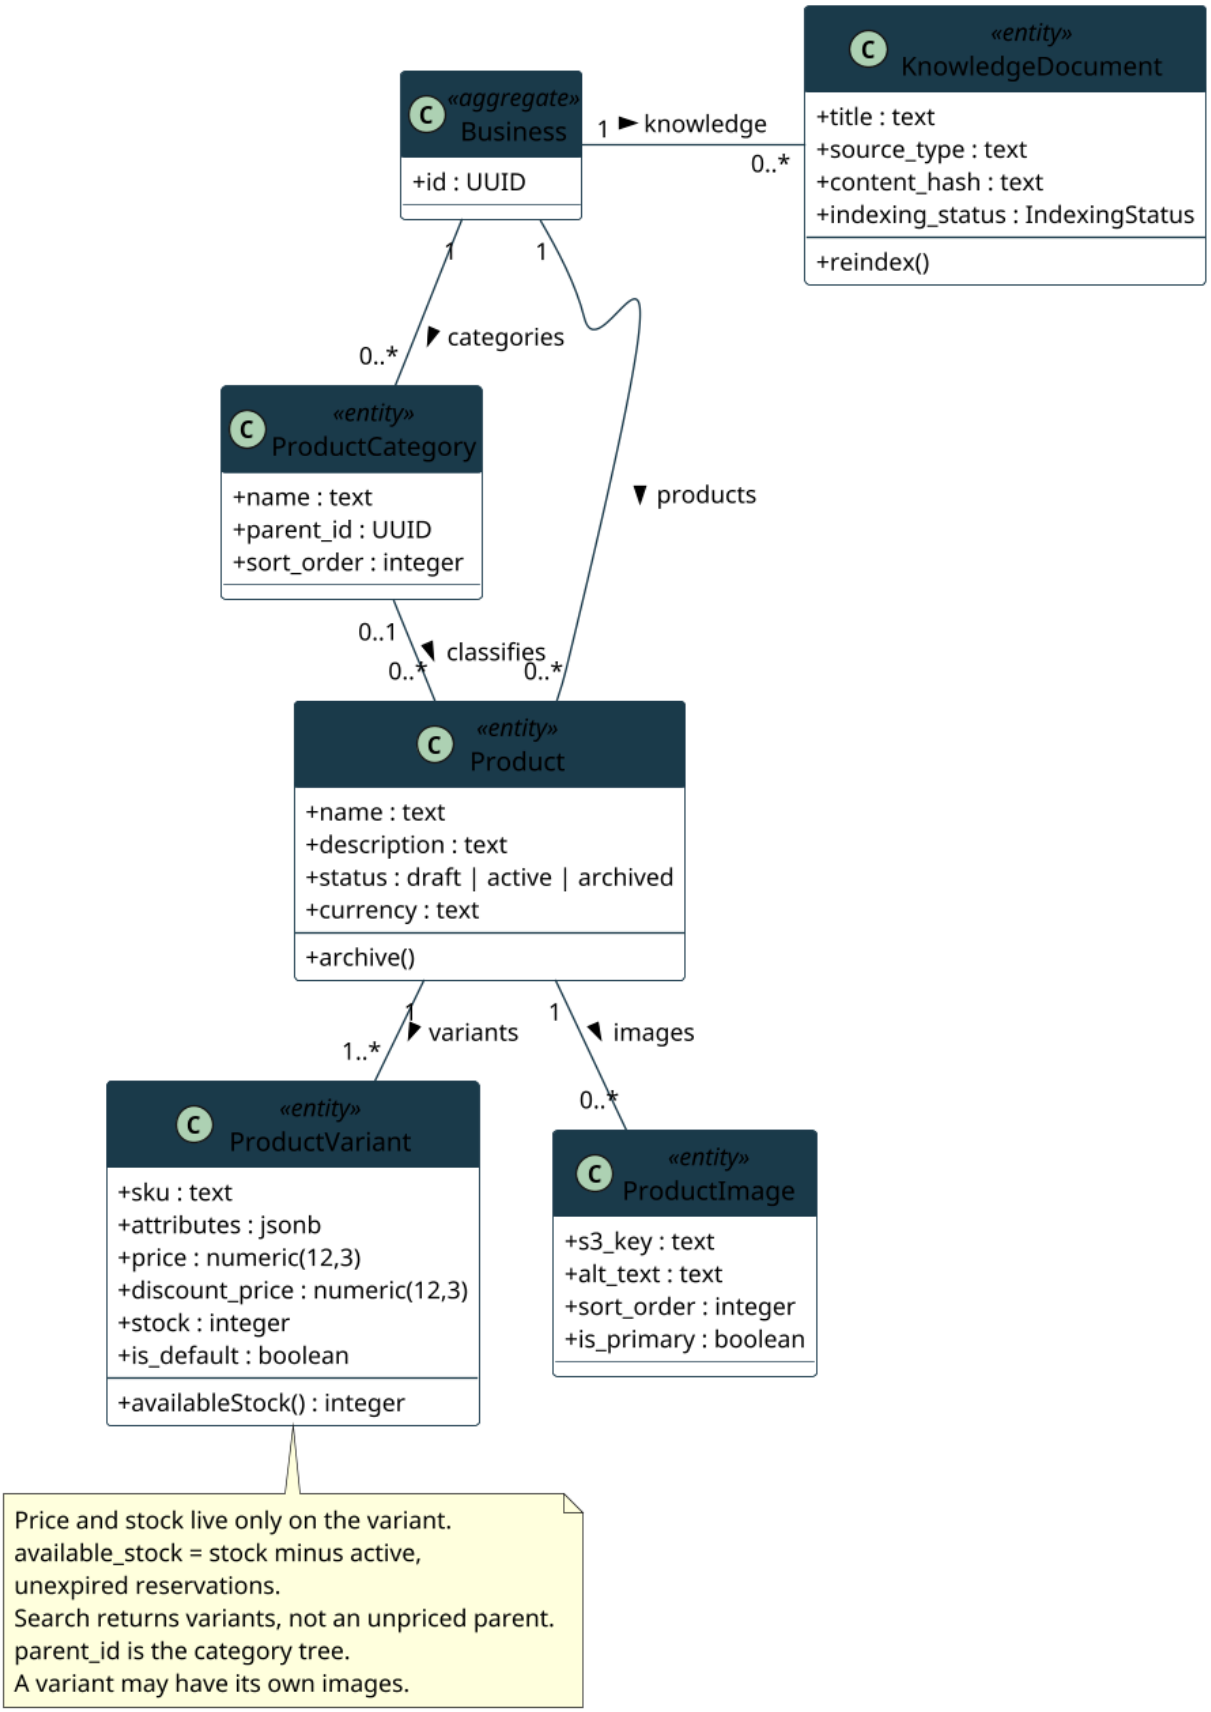

Identity and business rules

Users are global. Membership is per business. A rule edit inserts a new row. Source: `submission/sources/diagram-source-files/04-class-identity-catalog.puml`.

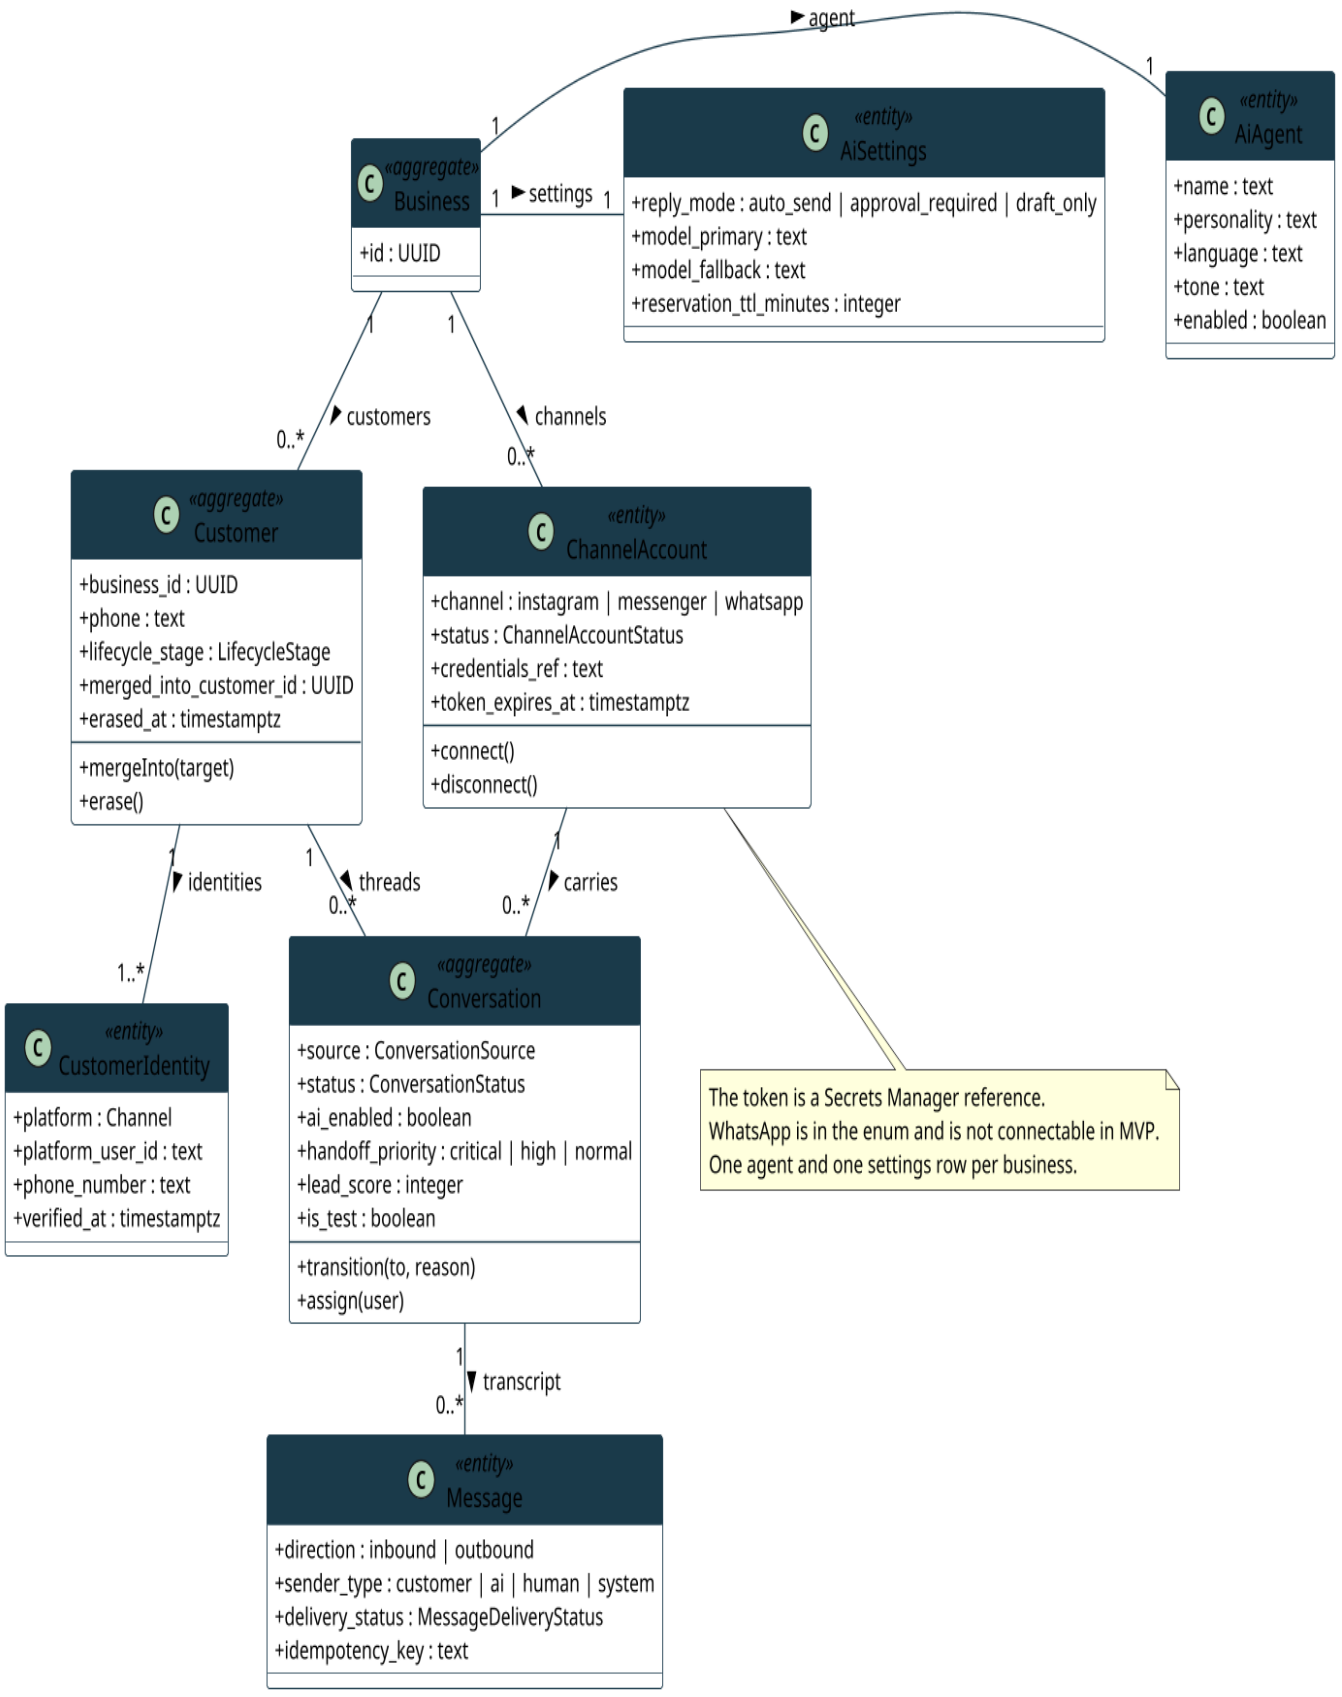

Catalog and knowledge

Price and stock live on the variant. Search returns variants, not an unpriced parent. Source: `submission/sources/diagram-source-files/04b-class-catalog.puml`.

Customers, conversations, and AI settings

One agent and one settings row per business. The channel token is a secret reference. Source: `submission/sources/diagram-source-files/05-class-commerce-messaging.puml`.

Orders and stock reservations

The reservation is committed when the pending order is created. Payment stays incomplete until a person records it. Source: `submission/sources/diagram-source-files/05b-class-orders.puml`.
